DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Bonneville et al. (US 5,636,288, hereinafter “Bonneville”).

Regarding claims 1, 9, 12, 13, Bonneville discloses a power supply circuit arrangement (standby power circuit arrangement) comprising:

a main circuit (circuitry in common with the main circuit 12; col. 6, lines 6-10) and an auxiliary circuit or speaker drive circuit (main subwoofer amplifier circuit 12), each coupled to derive their power supply voltage/current from a common power source (120 volt supply via input terminals 24A and 24B; col. 3, lines 34-36);

a control circuit (control circuit 30 detects audio signal input on lines 32; col. 3, lines 43-48, 66-67); and

variable impedance means (resistor 28 switches between applying a full supply voltage and a reduced supply voltage to the transformer 20; col. 3, line 37 – col. 4, line 5).

Regarding claim 2, Bonneville teaches circuitry which, like the control circuit, would be operative at the reduced voltage (col. 6, lines 6-14), while the main subwoofer amplifier circuit is inoperative at the reduced voltage (col. 6, lines 5-6).

Art Unit: 2643

Regarding claims 3, 4, 5, 7, 8, 10, 11, the variable-impedance means includes a resistor 28 and switch 26C (Fig. 1; col. 3, lines 30-54).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoon, Smith, Shih et al., Hou, and Eitan et al. show other power supply arrangements.
